Building With Earth Design and Technology of a Sustainable Architecture-Gernot Minke

Birkhauser Environmentally sustainable design (also called environmentally conscious design, eco design etc.) is the philosophy of designing physical objects, the built environment, and services to comply with the principles of ecological sustainability. Green building (also known as green construction or sustainable building) refers to both a structure and the application of processes that are environmentally responsible and resource-efficient throughout a building's life-cycle: from planning to design, construction, operation, maintenance, renovation, and demolition. This requires close cooperation of the contractor, the architects, the ...Green Building Architecture | Sustainable Development. Green Building Architecture is not only about using expensive products that minimize the use of electrical power which in turn would save oil and contribute to sustainable development.. There are various design features that are to be incorporated while designing a green building.
