Operations management is an area of management concerned with designing and controlling the process of production and redesigning business operations in the production of goods or services. It involves the responsibility of ensuring that business operations are efficient in terms of using as few resources as needed and effective in terms of meeting customer requirements. Supply-chain operations reference (SCOR) model is a process reference model developed and endorsed by the Supply Chain Council as the cross-industry, standard diagnostic tool for supply chain management. The SCOR model describes the business activities associated with satisfying a customer's demand, which include plan, source, make, deliver, return and enable. They say life is a journey, not a destination. That's also true when it comes to achieving a truly digitized supply chain. While many businesses view a fully digital supply chain as a pipe dream, they can start their journey through a small and non-intimidating step: implementing workflow automation.
