EVM and its Importance. This is known as the schedule performance index, $SPI = EV/PV$, and it is intuitively obvious that a value of $SPI < 1.0$ represents a project that is behind schedule. The schedule variance (SV) is another measure of the conformance of the earned progress to the planned progress: $SV = EV - PV$. The clearest guide yet to implementing Earned Value Project Management, this practical text ensures you can access all the benefits of using this tool. Rating: (not yet rated) 0 with reviews - Be the first. The first version of earned value management (or EVM) was developed during the Sixties by the Pentagon to measure how its projects were progressing. Since 2005, EVM has been a part of general federal project risk management practice. Using EVM, a project manager can answer these questions ... The difference between the accomplished work (\$60k of earned value) and the value of the planned work (\$100k) to date is \$40k. The graph shows this as a negative schedule variance. At this point in time the project is behind schedule, in dollars, by \$40k.
