

Download Studies In The Anatomy And Surgery Of The Nose And Ear 1918

The human nose is the most protruding part of the face that bears the nostrils and is the first organ of the respiratory system. The nose is also the principal organ in the olfactory system. The shape of the nose is determined by the nasal bones and the nasal cartilages, including the nasal septum which separates the nostrils and divides the nasal cavity into two. Anatomy (Greek *anatomē*, "dissection") is the branch of biology concerned with the study of the structure of organisms and their parts. Anatomy is a branch of natural science which deals with the structural organization of living things. It is an old science, having its beginnings in prehistoric times. Anatomy is inherently tied to developmental biology, embryology, comparative anatomy ... "The implanted VAD took over the pumping work of the heart, allowing Joseph to become stronger and physically better prepared to undergo heart transplant surgery."
