

Download The Liberator 3 D Printed Gun What You Need To Know

The Liberator is the closest thing to a completely plastic gun, but it still needs a steel nail to serve as the firing pin. The rest of Defense Distributed's blueprints relate to the frame of a gun, also known as a receiver. Now that we have confirmation that the Liberator 3D-printed pistol can be fired without destroying the body, let's address what this means for 3D printed weapons and, presumably, homemade weapons ...Everything you need to know about the 3D printed gun debate. A receiver is basically what makes a gun, well, a gun. It contains a number of internal components, including the actual firing mechanism, and it's the part of the gun that is required by law to be designated with a registration number by the ATF. To help get you up to speed with the history regarding Wilson and Defense Distributed, DIY weapons, the criminals who have been caught with them and laws that have been created to combat the rise of 3D printed guns, be sure to scroll on through the rest of our extensive 2018 3D printed gun digest.
