

# Download The Tell Tale Brain A Neuroscientists Quest For What Makes Us Human

An Arrow Indicates Your Location. MyBrainNotes™.com. HOME EXPLORE SITE OUTLINE BROWSE BOOKS CONTACT ME. Book Reviews and Excerpts About Evolution, Cognition, and the Neurobiology of Behavior Frequently in my early teaching career, I taught a computer literacy course. In this course I taught my student that a computer is a machine for the input, storage, processing, and output of information. Ramachandran was one of the first scientists to theorize that grapheme-color synesthesia arises from a cross-activation between brain regions. Empathy is the capacity to understand or feel what another person is experiencing from within their frame of reference, that is, the capacity to place oneself in another's position. There are many definitions for empathy that encompass a broad range of emotional states. Types of empathy include cognitive empathy, emotional empathy, and somatic empathy.
